THE THE STREET OF THE STREET

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

From the INTERNATIONAL BUREAU

United States Patent and Trademark Office (Box PCT) Crystal Plaza 2 Washington, DC 20231 ÉTATS-UNIS D'AMÉRIQUE

in its capacity as elected Office Date of mailing: 15 July 1999 (15.07.99) Applicant's or agent's file reference: 114410.2/DV/mb International application No.: PCT/CH99/00006 Priority date: 09 January 1998 (09.01.98) International filing date: 06 January 1999 (06.01.99) Applicant: RITTER, Rudolf

	1.	The designated Office is hereby notified of its election made: X in the demand filed with the International preliminary Examining Authority on: 15 June 1999 (15.06.99)	
•	2.	in a notice effecting later election filed with the international Bureau on: The election X was was not was not was not was not was expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).	
	1	Authorized Officer:	

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20, Switzerland

Authorized officer:

J. Zahra

VERIFICATION OF TRANSLATION

I, the undersigned, hereby declare:

That my name and address are as stated below under my signature;

That I am conversant with the English and German languages; and

That the attached translation is a true translation prepared by me of the accompanying International Application No. PCT/CH 99/00006 filed on January 6, 1999, and of the accompanying amended pages filed on December 2, 1999.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any U.S. patent issued thereon.

June 13, 2000

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/CH 99/00006

 Reasoned statement under Article 3 citations and explanations supporting 		inventive step or industrial appl	icability;
. Statement			
Novelty (N)	Claims	1-19	YES
	Claims		NO
Inventive step (IS)	Claims	1-19	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-19	YES
	Claims		NO

- 2. Citations and explanations
 - 1. The subject of Claim 1 is novel and inventive (PCT Article 33(2) and (3)).
 - 1.1 Claim 1 relates to a telecommunications method. In it digital data are received by way of a broadcast channel. The data are programme-accompanying data in a media programme. Reception is by way of a mobile telecommunications device comprising a radio receiver or a television receiver. The mobile device also has an identification card by means of which its user is identified. Information corresponding to the data received is displayed on a display in the mobile device. On receipt of an order from the user a message based on the data received and an identification of the user, obtained from the identification card, is prepared. The prepared message is then transmitted by a mobile radio network.
 - 1.2 The use of a mobile radio device to receive data accompanying a radio or television programme, and the preparation and transmission by the mobile radio device of a message based on this data, are not

PCT/CH 99/00006

rendered obvious by the relevant prior art.

EP-A-0 426 542 relates to a stationary system. The receiver device is a traditional television receiver which has in addition a card reader to identify the user. A message is produced by combining the data received and the user identification and is displayed to the user on the television screen. This message is then read by the user and forwarded offline. This document does not contain any indication that other devices can be used to receive the programme-accompanying data. This applies all the more to mobile telecommunications devices, which serve a different basic purpose. Even if on-line forwarding came to be considered, this document suggests a fixed connection such as a cable network. It therefore steers the reader away from using a mobile radio network.

WO-A-95/15654 discloses a similar system to EP-A0 426 542. The display is merely on a special handheld device which receives the programmeaccompanying data from the television receiver by an infrared link.

- 2. The remark above also applies to Claim 14, which corresponds to Claim 1.
- 3. The dependent claims relate to special embodiments of the subjects of the independent claims and are therefore also novel and inventive.

Unfortunately, like the radio or TV program channel, this channel for programaccompanying data is only monodirectional.

Broadcast channels having a backward channel whereby digital data are sent between a server and a number of receivers, e.g. by means of a push channel on the Internet, have meanwhile also become known. According to the user's choice and interests, these digital data can then be stored and/or filtered in the user's receiving system. For example, a complete information program can be transmitted to the user, who then decides, for instance, to display or store only the information pertaining to sports articles or politics. With these systems, the receivers can receive a program passively and respond only when, for example, they want more information on a subject or when they want to order a product. As is well known, however, it is difficult to identify users reliably on the Internet, so that this method is not entirely suitable for transmitting confidential or security-sensitive data, such as product or remittance orders, to the sender or to a supplier. Furthermore, the user must have a minimum knowledge of computer technology in order to take advantage of an offer transmitted through a push-channel in the media program. For instance, the user must compose an E-mail message containing his own identification, a description of the product to be ordered, and the identification of the chosen supplier. Hence this method is rather lengthy and troublesome. Moreover, possible errors made by the user or arising through problems with the transmission in the telecommunications network are not easy to locate. The result is a substantial percentage of orders which cannot be carried out because, for instance, the particulars from the user have been entered incompletely or erroneously.

It is therefore the object of the present invention to provide a telecommunications system which avoids these drawbacks.

This object is attained, according to the invention, by means of a method and a system having the features of the respective independent claims, preferred embodiments being presented moreover in the dependent claims.

Claims

1. Telecommunication method comprising the following steps:

receiving by means of a suitable receiving system (9) digital data (5) sent out over a broadcast channel (7, 8), the receiving system including an identification (94) card by which the user of the receiving system is identified,

displaying information, corresponding to the received digital data, on a display (90) of the receiving system,

entering of a command by the user,

5

15

20

preparing a message corresponding to the entered command, the prepared message including at least one data field (521, 522, 524) from the digital data (5) received and an identification of the user determined from the identification card,

sending the prepared message over a bidirectional telecommunications network (8).

- 2. Telecommunication method in accordance with claim 1, wherein said digital data are transmitted as program-accompanying digital data (5) in a media program (4), and said bidirectional telecommunications network is a mobile radio network.
 - 3. Telecommunication method in accordance with claim 2, wherein said media program (4) is reproduced by the receiving system (9).
- Telecommunication method in accordance with one of the preceding
 claims, wherein the displayed information contains at least one menu from which a command can be selected.

- 5. Telecommunication method in accordance with one of the preceding claims, wherein the digital data can contain applets (50) which are executed by the receiving system (9).
- 6. Telecommunication method in accordance with one of the preceding claims, wherein, when the components needed for processing and displaying these data are switched off, the digital data received are temporarily stored in a buffer and not processed until these components are switched on.
 - 7. Telecommunication method in accordance with one of the preceding claims, wherein the digital data received are packed in messages (5) which are first evaluated in order to determine whether they must be displayed.

- 8. Telecommunication method in accordance with claim 7, wherein the received messages (5) which are not of interest to the user are sorted out with the aid of a user profile stored in the memory of the receiving system (9).
- 9. Telecommunication method in accordance with one of the preceding claims, wherein the broadcast channel (7) is a radio channel.
 - 10. Telecommunication method in accordance with one of the claims 1 to 9 <*sic.* 8>, wherein the broadcast channel (7) is a TV channel.
 - 11. Telecommunication method in accordance with one of the preceding claims, wherein the prepared message is a SMS message.
- 12. Telecommunication method in accordance with one of the preceding claims, wherein the prepared message is a USSD message.
 - 13. Telecommunication method in accordance with one of the preceding claims, wherein the prepared message is signed.
- 14. Telecommunication method in accordance with one of the preceding claims, wherein the prepared message is encrypted.

15. Receiving system comprising:

receiving means for receiving a media program (4), sent out over a broadcast channel (7; 8), and program-accompanying data (5),

reproducing means (90, 95) for playing back to the user the media program received,

an identification card (94) for identifying the user of the receiving system (9),

mobile radio components by means of which the receiving system (9) can be utilized in a mobile radio network (8),

message-preparing means for preparing and sending over the mobile radio network (8) messages including at least one data field (521, 522, 524) from the program-accompanying data (5) and an identification of the user.

- 16. Receiving system in accordance with claim 15, wherein said receiving means comprise a radio receiver.
- 17. Receiving system in accordance with claim 15, wherein said receiving means comprise a television receiver.
 - 18. Receiving system in accordance with one of the claims 15 to 17, wherein the mobile radio components comprise a GSM mobile apparatus.
- 19. Receiving system in accordance with one of the claims 15 to 18, wherein the identification card is a SIM card (94) capable of executing the applets (50) transmitted in the program-accompanying data (5).
 - 20. Receiving system in accordance with one of the claims 15 to 19, wherein the message-preparing means are capable of preparing and sending SMS messages.

- 21. Receiving system in accordance with one of the claims 15 to 20, wherein the message-preparing means are capable of preparing and sending USSD messages.
- 22. Receiving system in accordance with one of the claims 15 to 21, further comprising a key (92) for causing information, corresponding to the digital data received, to be displayed on a display (90) of the receiving system.
